

Public Denied a Say

NZ's current legislation (EEZ-CS Act) classifies exploratory drilling and the discharge of drill fluids and production water at sea as 'non-notified' activities.

There is no public submission, hearing or scrutiny.

We get no say while fossil fuel companies pillage and poison our oceans.

**The time
for change
is NOW**

Climate Justice Now

New Zealand cannot be proactive about climate change, while oil corporations continue drilling in Taranaki and Aotearoa.

The on-going mining of fossil fuels diverts money and resources from more sustainable alternative energy options.

The time for action on climate change and a just transition for workers and communities was yesterday.

It's Not Over Yet

CLIMATE JUSTICE TARANAKI

Committed to:

- justice
- action &
- true solutions
to climate
change.

Earlier this year the new Labour-led Government announced that no more new offshore oil exploration licenses were to be issued.

That's good for climate change – or is it?

Taranaki is the Sacrifice Zone

Sadly for Taranaki, it's business as usual both on and offshore.

Most of New Zealand's exploration and drilling takes place here in Taranaki.

In 2018, the government is releasing 1,703 sq km of Taranaki land for oil and gas exploration.

Oil and gas the world cannot afford to burn if there's to be any hope of abating catastrophic climate change.

Right now, Todd Energy and other companies are ramping up their drilling, fracking and waste dumping activities all around Taranaki.

Megabucks Austrian oil and gas company OMV (which has purchased Shell's offshore oil interests) is proceeding full steam ahead.

OMV plans to drill 12 new exploratory/appraisal wells in six licensed areas spanning almost 9,000 sqkm in the Taranaki Basin.

The public has no say in whether these 12 new wells go ahead or not.
